Signature of Internal Examiner: _____

Signature of External examiner: _____

Corporate Behavioural Skills Constitution

Project 4 | Professional Development III (Behavioural Skills)

1. Introduction and Objectives

This project, **Corporate Behavioural Skills Constitution**, proposes a clear set of behavioural expectations for a fictional growing IT company. The constitution converts the five behavioural skill areas taught in Professional Development III into practical workplace rules. Its purpose is to support a respectful, collaborative and productive work culture.

Technical skills help employees complete tasks, but communication, etiquette, learning habits, emotional self-management and conflict handling influence how people work together. A shared constitution makes these expectations visible and gives employees a common reference for everyday decisions.

Learning objectives

- To identify behavioural issues that can affect workplace culture and productivity.
- To convert the five PD-III units into clear organizational expectations.
- To apply creativity and ideation techniques to workplace problem-solving.
- To encourage respectful communication, continuous learning, empathy and constructive conflict handling.
- To propose an action plan for introducing and reviewing the constitution.

2. Professional Scenario / Problem Statement

The fictional organization is a growing IT company whose employees have strong technical skills but face recurring challenges in communication, workplace etiquette, teamwork and conflict handling. There is no consistent written set of behavioural expectations, so employees may respond differently to similar workplace situations.

Problem statement: The absence of clear behavioural guidelines contributes to miscommunication, poor teamwork, unprofessional conduct and unresolved conflicts. The company needs a shared constitution that explains expected behaviour and supports a positive work culture.

Behavioural issues

- Inconsistent communication between employees.
- Poor workplace etiquette in meetings and digital communication.
- Lack of accountability and inconsistent response to feedback.
- Emotional reactions during stressful situations.
- Unresolved disagreements and informal conflict handling.

Causes and triggers

- No formal behavioural rules or guidelines.
- Insufficient training and awareness.
- Individual differences in communication and working styles.
- High work pressure and deadlines.
- Absence of a regular feedback system.

3. Application of the Five Units: The Constitution

Preamble

We, the members of this organization, commit to building a professional workplace based on creativity, respect, continuous learning, emotional awareness and constructive conflict resolution. These principles apply to meetings, project work, digital communication and interactions across teams.

Article I – Creativity

Concept: Creativity includes idea generation, creative thinking and practical problem-solving. Employees should explore alternatives and avoid becoming fixed on the first proposed solution.

Rules and application

- Encourage employees to share ideas without immediate judgement.
- Use brainstorming to generate multiple possible solutions before evaluating them.
- Apply the Six Thinking Hats technique to examine a professional issue from different perspectives: facts, feelings, risks, benefits, creative possibilities and process.
- When a creativity block occurs, clarify the problem, gather information, take a different perspective and test a small alternative.

Example: If a project is delayed, the team can brainstorm options such as redistributing tasks, simplifying a feature or changing the work sequence. The Six Thinking Hats can help the team examine facts, risks, benefits and new possibilities before selecting an option.

Key takeaway: More ideas and structured thinking can lead to better decisions.

Article II – Etiquette

Concept: Workplace etiquette means following respectful and professional standards in face-to-face and digital interactions.

Rules and application

- Meeting etiquette: arrive prepared, listen without interrupting, stay on topic and respect speaking time.
- Email etiquette: use a clear subject, professional language, a suitable greeting and a concise message; check recipients and attachments before sending.
- Mobile etiquette: keep devices silent in meetings and avoid unrelated phone use during discussions.
- Internet etiquette: use respectful language, protect confidential information and avoid sharing unverified or inappropriate content.
- Business-card etiquette: offer and receive cards respectfully and handle the information carefully.
- Dining etiquette: be punctual, use polite conversation, follow basic table manners and respect others' preferences.

Do: Listen, be punctual, use courteous language and respond professionally.
Don't: Interrupt, use a phone disruptively, send careless messages or share confidential information.

Key takeaway: Professional conduct builds trust and creates a respectful workplace.

Article III – Growth Mindset

Concept: A growth mindset means believing that skills can develop through effort, practice, feedback and learning from mistakes.

Rules and application

- Treat mistakes as learning opportunities rather than reasons to blame.

- Accept constructive feedback and identify one action for improvement.
- Try new approaches when an existing method is not working.
- Build positive habits: regular learning, reflection after tasks and asking for feedback.
- Replace “I cannot do this” with “I can improve with practice.”

Key takeaway: Consistent effort and openness to feedback support professional growth.

Article IV – Emotional Intelligence

Concept: Emotional intelligence includes self-awareness, self-management and empathy. It helps employees understand their reactions and consider other people's perspectives.

Rules and application

- Recognize emotional triggers, especially during deadlines and disagreements.
- Pause and think before responding when frustrated or upset.
- Listen to understand another employee's perspective instead of making assumptions.
- Use calm, clear language when discussing difficult issues.
- Build professional relationships through empathy, cooperation and respectful feedback.

Example: When a colleague points out an error, an employee should avoid an immediate defensive response, clarify the feedback and decide what correction is needed.

Key takeaway: Self-management and empathy support healthier relationships and reduce unnecessary stress.

Article V – Conflict Resolution

Concept: Conflict resolution involves listening to the people concerned, identifying the issue, negotiating possible solutions and using mediation when required.

Rules and application

- Address disagreements respectfully and focus on the issue, not personal attacks.
- Give each person an opportunity to explain their point of view.
- Identify shared goals and negotiate a practical win-win solution where possible.
- Record agreed actions and responsibilities when a conflict affects project work.
- Request a neutral mediator or team lead when the parties cannot resolve the issue themselves.

Key takeaway: Healthy conflict handling strengthens collaboration and team performance.

4. Integrated Solution / Proposed Model

The constitution is designed as one connected system rather than five unrelated sets of rules. Creativity improves the quality of ideas; etiquette creates a respectful environment for sharing them; growth mindset encourages learning and adaptation; emotional intelligence supports calm and empathetic interaction; and conflict resolution provides a fair process when opinions differ.

Constitution area	Organizational practice	Expected contribution
Creativity	Brainstorming, Six Thinking Hats and alternative solutions.	Better idea generation and decisions.
Etiquette	Shared standards for meetings, email, mobile, internet, cards and dining.	Respectful and consistent communication.
Growth mindset	Feedback, reflection, learning from mistakes and positive habits.	Continuous improvement.

Constitution area	Organizational practice	Expected contribution
Emotional intelligence	Pause, self-awareness, self-management and empathy.	Healthier relationships and calmer responses.
Conflict resolution	Listen, negotiate, agree actions and mediate when needed.	Fewer unresolved disputes.

Implementation flow: Approve the constitution → Train employees on the five units → Share and display the rules → Apply them in daily work → Collect feedback → Review progress with team leads → Reinforce positive behaviour.

5. Expected Outcomes

- Improved communication and teamwork through consistent professional conduct.
- Fewer avoidable conflicts and better problem-solving.
- More open idea-sharing and thoughtful decisions.
- Greater willingness to accept feedback and learn from mistakes.
- Better emotional self-management and more respectful relationships.
- A positive work culture that can support productivity and employee satisfaction.

The company can review progress through meeting observations, employee feedback, the quality of team decisions, completion of agreed conflict actions and periodic checks on whether employees understand and apply the constitution.

6. Conclusion and Personal Reflection

The Corporate Behavioural Skills Constitution provides a practical framework for expected behaviour in a growing IT company. It translates the five units of Professional Development III into workplace rules that employees can apply in routine interactions. A written constitution alone cannot change a culture; it must be supported by training, consistent practice, feedback and fair reinforcement. When employees follow the principles, the organization can build stronger teamwork and a more respectful working environment.

Personal reflection

Reflection prompt	Response
One concept understood better	Emotional intelligence.
One behaviour to improve	Active listening.
One situation to apply the learning	Team meetings and group discussions.

7. References and Project Visuals

1. Professional Development III (Behavioural Skills), End-Semester Practical Examination – Project & Viva Guidelines, SAGE University, Academic Session 2026–27.
2. Professional Development III course notes and classroom learning for Units I–V (as applicable).

The two chartsheets titled “Corporate Behavioural Skills Constitution” (Chart 1: Diagnosis & Concepts; Chart 2: Application & Solution) form the visual component of this report and should be attached after this section when submitting the printed file.

8. Project Alignment and Viva Readiness

The project follows the approved Project 4 structure. Chart 1 explains the company scenario, behavioural issues, causes and concepts from all five units. Chart 2 presents the unit-wise interventions, comparison of behaviour before and after implementation, action plan, expected outcomes and reflection. For the viva, the student should be able to explain why written behavioural expectations are needed and how each article can be applied in a real workplace situation.

Viva summary: The constitution turns the five behavioural skill areas into shared workplace expectations: generate ideas, communicate respectfully, keep learning, manage emotions and resolve disagreements constructively.
